## A Curriculum Vitae

Jérôme Hugues

Birthdate: January 31, 1978

<http://www.jerome-hugues.net/>

jhugues@andrew.cmu.edu

Citizenship: French

### A.1 Positions

apr. 2019 - *Senior Researcher – CARNEGIE MELLON / SOFTWARE ENGINEERING INSTITUTE*

Member of the Assuring Cyber-Physical Systems Directorate, deputy lead of the Model-Based Engineering initiative.

Research in model-based technologies, with a strong focus on AADL: systems engineering, code generation, application of formal methods for safety-critical systems.

oct. 2009 -

*Professor – ISAE-SUPAERO*

apr. 2019

Head of third year curriculum in Computer Science, head of the Advanced Master in Embedded Systems. Teaching classes on real-time systems (RTOS, language, scheduling), model-based technologies (SysML, AADL), synchronous languages (SCADE) for the Supaero engineering degree, the Embedded Systems Advanced Master and the Aeronautical and Space Systems Master of Science. Promoted to Professor rank in September 2018.

Research in model-based technologies, with a strong focus on AADL: code generation, application of formal methods for safety-critical systems.

oct. 2009 -

*Associate Professor – TELECOM PARISTECH*

oct. 2005

Taught classes on real-time systems, synchronous languages (Lustre, Esterel) and software engineering for the Telecom ParisTech engineering curriculum, and the Master of Science SAR, with Université Pierre et Marie Curie. Research activities on distributed systems, real-time systems, use of formal methods in the context of distributed systems.

*Model-Based System/Software Engineering, AADL,*

**Keywords:** *Distributed, Real-Time, Embedded Systems, Software Engineering, Modeling, formal verification, proof of programs.*

### A.2 Diploma

2017

*“Habilitation à Diriger des Recherches” – INP Toulouse*

Summary of my research activities to become full professor, defended in front of a jury of academic Professors.

Topic of the dissertation: *“Architecture in the Service of Real-Time Middleware – Contributions to Architecture Description Languages”.*

2002 - 2005

*PhD in Computer Science – Telecom ParisTech*

PhD thesis performed in the “Computer and Network” team of the LTCI with Telecom ParisTech.  
Graduated with honors.

Topic of the dissertation: “*Architecture and services of real-time middleware*” under the supervision of L. Pautet (Telecom ParisTech) and F. Kordon (LIP6/SRC).

Available at <https://www.theses.fr/2005ENST0034>

2001 - 2002            *MSc in Distributed Systems – Université Pierre et Marie Curie*

Classes on distributed systems, concurrency, covering both practical and theoretical aspects.  
Master Thesis dissertation on “*MOMA, Message Oriented Middleware for Ada*” under the supervision of L. Pautet (Telecom ParisTech) and F. Kordon (LIP6/SRC).

1999 - 2002            *Telecom ParisTech Engineering Degree*

Classes on computer science, networked systems, signal processing.  
Equivalent to a US MSc in Electrical Engineering

## B Teaching activities

Prior to joining CMU/SEI, I was Professor with ISAE-Supaero, qualified as “Maître de Conférences” in the Computer Science section or CNU27 in 2006, and as “Professeur” in 2018. My academic career led me to two institutions: first as an associate professor with Telecom ParisTech starting in 2005, then with ISAE-Supaero since 2009 up to 2019.

*Note: The following list elements starting from 2009 onwards. The detailed list of classes and topics is available on request.*

**Aims** As a professor, my mission consisted of training engineers for the safety-critical domain. My teaching activities covered multiple aspects of critical systems engineering: languages, methods, tools; both theoretical and practical.

**Programs supervision** Starting in 2009, I taught courses on real-time systems embedded within ISAE Engineers and Master’s Programs. I was the Head for ISAE of the specialized master “ Embedded Systems ” and of the last year CS program of the ISAE-Supaero Engineering degree.

Each program trains engineers for the aeronautics domain at large, with a strong focus on safety-critical systems. I participated in the selection of professors from both academia and industry, and the definition of the classes.

**Classes taught** I taught several classes on embedded systems: real-time systems (RTOS and scheduling), Architecture design using AADL, real-time languages (Ada, RTSJ), distributed systems; along with projects mentoring. Classes are taught either in French or in English to foreign students.

The global volume of face-to-face with students exceeds 200 hours per academic year, for a cumulative cohort of 100+ students.

**Teaching Chair** From November 2015 to April 2019, I was the recipient of the Thales teaching chair on “Architecture and engIneering of embedded SystEms” or ARISE. This chair aims at creating an expert track for our engineering students through the creation of advanced training classes, seminars and dedicated projects.

## C Research activities

Through my career, I have been involved in research activities on model-based techniques in the context of safety-critical systems.

*Keywords: AADL, SysML, model-based system/software engineering, safety-critical systems, formal verification, Ada/SPARK, RTOS, ARINC653*

### C.1 Summary of research activities

My research focuses on “*Architecture of Embedded Systems*” at large: real-time, embedded, cyber-physical or safety-critical. The long term objective is to define 1) unambiguous description mechanisms combined with guided methodology for 2) the analysis and 3) the synthesis of complex systems. These topics are pushed forward through:

**Architecture Description Languages – AADL** I am a core member of the SAE AS2-C committee working on AADL since 2006. The AADL language is a concise and precise language defined to describe and analyze complex systems. Our contributions aim at transitioning AADL models to executable systems, either through model checking or code generation.

Since 2006, I contribute to the definition of AADLv2 [3] and subsequent revisions, the Data Modeling, Code Generation and ARINC653 annex documents [1, 2]; and the Ocarina AADL toolchain.

**Model processing tools – Ocarina** My research activities around AADL are validated by the Ocarina toolchain, a model transformation suite developed since 2004. As part of projects and Ph.D. mentoring, we developed transformation towards Petri nets, scheduling analysis tools but also code generation towards high-integrity runtimes.

These contributions have been deployed in various R&D projects with academic and industrial partners: H2020 ESROCOSS (with GMV, Airbus Defence and Space, DLR); TASTE (with the European Space Agency, Eridiss); Flex-eWare (with Thales) or IRT Saint-Exupery.

**Middleware for high-integrity systems – PolyORB-HI** These highly configurable middleware are built on the “schizophrenic” middleware paradigm, enforcing a strong separation of concerns in middleware constructs, and aligned with requirements for high-integrity systems. PolyORB-HI is combined with code generated from AADL models to target various real-time platforms: Ada and SPARK2014; C RTOS (POSIX, RTEMS, Xenomai, FreeRTOS) or safety-critical OS (VxWorks653, DDC-I or XtratuM).

**Summary of contributions** Through the careful combination of AADL and code generation, supported by Ocarina and PolyORB-HI, we demonstrated how to reduce the complexity of the infrastructure code to support complex systems. This allows for better analyzability of systems through WCET analysis, proof of programs, while preserving performance and memory footprint.

These contributions have been published as Open Source software, and through academic publications.

### C.2 Scientific activities

#### Standardization committee

2006 –

*Member of SAE AS2-C committee, on the Architecture Analysis and Design Language*

Standardization committee work, 4 meetings/year. Redaction of elements of the standard and promotion of AADL through books [25, 26] and tutorials (ESWeek, MODELS, HILT, ...)

### Organization of conferences and workshops

- IEEE International Symposium on Rapid System Prototyping (IEEE RSP), General Chair (2009), Program Chair (2008, 2010, 2012), Publicity Chair (2004-), member of the Steering Committee (2007- )
- Architecture Centric Virtual Integration Workshop, Organizer, 2016
- French Summer School on Real-Time systems: organizing team 2009 (Paris) and 2013 (Toulouse), steering committee (2009-)
- Dagstuhl Seminar #12272 “Architecture-Driven Semantic Analysis of Embedded Systems” with Peter Feiler (CMU/SEI) and Oleg Sokolsky (U. Penn.) [9]
- UML&AADL conference 2012, PC Chair
- Reliable Software Technologies 2009, Tutorial Chair

### Program committees

- Architecture Centric Virtual Integration Workshop (ACVI), 2014-2016
- International Conference on Software and Systems Engineering and their Applications (ICSSEA), 2011-2013
- International Workshop on Embedded Data-Centric Systems (EDACS), 2009
- Reliable Software Technologies, 2008-2019
- IEEE International Symposium on Object and component-oriented Real-time distributed Computing (IEEE ISORC), 2006-2008
- UML&AADL conference, 2010-2011
- UML&Formal Methods, 2011-2012
- Brazilian Conference on Critical Embedded Systems, 2011-2013
- International Workshop on Analytical Virtual Integration of Cyber-Physical Systems (AVICPS), part of RTSS, 2011-2014
- International Conference on Embedded Software (EMSOFT), 2013
- International Conference on Real-Time Networks and Systems (RTNS), 2013-2017
- Conférence francophone sur l’Architecture Logicielle (CAL), 2014-2016
- International Workshop on Model-Based Architecting and Construction of Embedded Systems (ACES-MB), part of Models, 2013
- EWiLi, Embedded Operating Systems Workshop, part of ESWeek, 2014-2019
- CRTS, Workshop on Compositional Theory and Technology for Real-Time Embedded Systems, part of RTSS, 2017
- FTSCS, International Workshop on Formal Techniques for Safety-Critical Systems, part of IFCEM, 2016, 2018

### Journals

- Member of the Editorial Board of Springer “International Journal on Software Tools for Technology Transfer” since 2017
- Editor (2012) with Oleg Sokolsky of a special issue of “Science of Computer Programming” (Elsevier) as a follow-up of the Dagstuhl Seminar #12272 [23]
- Editor (2009) with Kenneth Kent of a special issue of “Software Practice and Experience” (Elsevier), best papers of Rapid System Prototyping 2009, [24]

- Reviewer for ACM TECS, IEEE DS Online, Springer DAEM, Elsevier SCP, Wiley SPE, Springer SoSym, IEEE TDSC

### C.3 Invitation to workshops

As part of my scientific contributions, I have been invited to seminars organized by other scientists from the following communities: System Architecture, Software Certification and Cyber-Physical Systems. The following lists are the most relevant ones:

- Software Certification Consortium, every year since 2016, panelist at the 2018 edition (<https://cps-vo.org/node/54714>);
- GeorgiaTech Decision and Control Laboratory seminar, invited by Eric Feron, May 2016, [128]
- Inria, CONVECS team winter seminar, by Hubert Garavel, November 2013, [132],
- Dagstuhl seminar #13051 “Software Certification: Methods and Tools”, [134],
- Dagstuhl seminar #11441 “Science and Engineering of Cyber-Physical Systems”, [135]
- Robotics seminar, UC Berkeley, invited by Edward Lee, [136]
- Journée AdaSpain,invited by Juan Zamorano, [138]

### C.4 Grant reviews and panelist

I reviewed project proposals for the following calls:

2017                   *Austrian Science Fund (FWF) – doc.funds programme.*

Reviewer

2016                   *Agence National de la Recherche/Cofecub*

Reviewer for the ANR CofeCub call for proposals

2011 – 2013           *Agence National de la Recherche*

Reviewer for the ANR SIMI2 call for proposals

I have been panelist in the following calls

2014 - 2017           *Agence Nationale de la Recherche – Generic call for proposals*

“Appel à Projets Générique” (AAPG). Member of phase 1 and 2 panels, project review, sollicitation of external reviews

2011 - 2013           *ANR – Digital Engineering and Security call “Ingénierie Numérique et Sécurité” (INS)*

Member of phase 1 and 2 panels, project review, sollicitation of external reviews

### C.5 Research projects

Here is a list of collaborative projects I contributed to.

2008 –               *ESA TASTE*

TASTE provides a set of code generation facilities for the space domain. It is lead by the European Space Agency. We provide support for Ocarina and PolyORB-HI to ESA and its partners.ESA funded multiple initiatives to improve Ocarina and PolyORB-HI from 2009 to 2016. This has been pursued by the H2020 ESROCOS project.

2018 - 2020 RTRA DAEDALUS

DAEDALUS explored the interplay between simulation of AADL systems as an extension of code generation, and model checking. In this context, we extended Ocarina to support the AADL Behavioral annex, and extended PolyORB-HI runtime capabilities to be embedded in a simulator and get execution traces to be compared with the symbolic execution through a model checker.

2016 - 2018 H2020 ESROCOS

ESROCOS aims at transitioning TASTE for safe robotics applications. We studied the qualification of the Ocarina toolchain and the PolyORB-HI middleware.

2016 - 2017 VIRTUAL SIMULATION OF AVIONICS EMBEDDED PLATFORM: INTEGRATING AADL AND FMI TO EXTEND VIRTUAL INTEGRATION CAPABILITY

This project evaluated the usage of the Functional Mock-up Interface standard to increase confidence in AADL models through system-level simulations.

2016 - 2017 IRT MOISE

MOISE addressed systems engineering shortcomings in extended company settings. We studied the coupling between architectural models and safety analysis.

2014 - 2016 INTEGRATING MODEL-BASED ANALYSIS TO SUPPORT VERIFIABLE SYSTEM COMPOSITION

This project studied AADL support for code generation for ARINC653 environments, safety analysis. This project has been done in collaboration with CMU/SEI.

2015 - 2016 IRT INGEQUIP

INGEQUIP explored topics in equipment engineering. We focused on software/hardware co-design support using AADL.

2013 - 2016 R-TYPE

R-Type combined refinement and typing techniques inspired from the B method to improve system modeling and proof of correctness in AADL.

2011 - 2012 MBSA

Definition of a modeling methodology using AADL, for Rockwell-Collins use case.

2007 - 2009 FUI COUVERTURE

Tools and methodology for improved code coverage, application to PolyORB-HI.

2007 - 2010 FUI-4 MOSIC

MOSIC – Middleware Ouvert pour Systèmes d’Information Critiques – unified DDS and CCM technologies, and applied verification techniques to these middleware, with Thales Air Systems, PrismTech et OBEO.

2007 - 2009 ANR FLEX-EWARE

Flex-eWare aimed at leveraging component-based approaches for the engineering of embedded systems. We defined the foundations of code generation targeting the C language and RT-Linux.

2004 - 2007 FP6-IST ASSERT

ASSERT defined a process for the construction of space applications, leveraging code generation strategies from AADL models. This project is the root of the Ocarina and PolyORB-HI projects.

## C.6 Open Source Software

All my collaborations are gathered in two Open Source software:

2004 – *Ocarina – PolyORB-HI*  
<http://www.openaadl.org>

Ocarina is an integrated toolchain for AADL. I am leading the project, with partners from ESA, ENIS and the SEI. Combined with the PolyORB-HI middleware, Ocarina provides support to analyze (schedulability analysis, formal methods) and then generate critical systems. Part of this work led to the definition of AADL annex documents. This project has 200KSLOCs, it has been used in multiple R&D projects at ESA, and by partners from both industry and academia. We are transitioning it towards industry as part of the TASTE and ESROCOOS projects, improving code quality and adherence to qualification standards.

2002 – 2007 *PolyORB*  
<http://www.adacore.com>

PolyORB is a “schizophrenic” middleware, a generic framework to support multiple standards for distributed systems (CORBA, DSA, MOM, ...). I contributed to this project as part of my Ph.D. work, and my early career.

This software is now a fully supported product by AdaCore, and used by customers like Eurocontrol and Airbus Defence and Space.

## C.7 Alumni

### PhD students

- Patrick LESERF, 10/2013 - 5/2017, *Optimization of Embedded Systems Architectures in a Model-Based Setting.*, co-advisor with P. de Saqui-Sannes (ISAE).
   
**Publications:** [31, 48, 52]
- Guillaume BRAU, 3/2013 - 3/2017, *Architecture Analysis Codesign through Model-Driven Engineering*, co-advisor with N. Navet (Université du Luxembourg).
   
**Publications:** [51, 55, 58].
- Gilles LASNIER, 10/2008 - 8/2012, *Integrating Safety and Security in Model-Based Workflows, Towards Verification and Code Generation.*, co-advisor with L. Pautet (Telecom ParisTech/LTCI).
   
**Publications:** [69, 71, 79]
- Olivier GILLES, 3/2007 - 4/2010, *Integrating the Target Platform in the Design of Safety-Critical Embedded Systems in a Model-Based Approach*.
   
**Publications:** [10, 11, 13, 74, 76, 77, 84, 85]
- Xavier RENAULT, 10/2006 - 12/2009, *Integration of Formal and Semi-formal Models to Implement Distributed Real-time Embedded Systems.*, co-advisor with F. Kordon (LIP6/MoVe).
   
**Publications:** [80, 81, 83, 87].
- Bechir ZALILA, 10/2005 - 11/2008, *Configuration and Deployment of Distributed Real-Time Embedded Systems using an ADL.*, co-advisor with L. Pautet (Telecom ParisTech/LTCI).
   
**Publications:** [14, 15, 79, 88, 89, 90, 91, 93, 95, 96, 97, 99]

### Post-docs

- Rahma BOUAZIZ, 4/2019 - 3/2020, “*Simulation of AADL models*”, as part of the Daedalus project.
- Tatiana PROSVIRNOVA, 1/2016 - 6/2017, “*Coupling of Error Propagation Models and Model-Based Systems Engineering.*”, as part of the IRT MOISE project.
- Bassem OUNI, 3/2015 - 7/2016, “*AADL-based hardware/software codesign workflow.*”, as part of the IRT INGEQUIP project.

- Vincent GAUDEL, 10/2014 - 12/2015, “*Exhaustive simulation of AADL models*”, as part of the TASTE project.

- [119] Jérôme Hugues and Frank Singhoff. AADLv2, an Architecture Description Language for the Analysis and Generation of Embedded Systems". In *ESWeek'2013 Tutorial*, Montreal, Canada, October 2013. URL <http://oatao.univ-toulouse.fr/9288/>.
- [120] Jérôme Hugues. Intergiciels pour le temps réel. In *Tutoriel présenté à l'école d'été temps réel (ETR'11)*, Brest, France, September 2011.
- [121] Jérôme Hugues and Frank Singhoff. Développement de systèmes à l'aide d'AADL - Ocarina/Cheddar. In *Tutoriel présenté à l'école d'été temps réel (ETR'09)*, Paris, France, September 2009.
- [122] Thomas Quinot and Jérôme Hugues. Building interoperable applications with PolyORB. In *Tutorials of Reliable Software Technologies'07*, June 2007.
- [123] Jérôme Hugues. Distribution in Ada 95 with PolyORB, A Schizophrenic Middleware. In *Tutorials of Reliable Software Technologies'06*, June 2006.

## D.12 Invited talks

- [124] Guillaume Brau, Christophe Garion, and Jérôme Hugues. Towards the qualification of an AADL model transformation tool with contracts. 2019. URL <http://projects.laas.fr/IFSE/FAC/previous/journ%C3%A9es-fac-2019/>.
- [125] Jérôme Hugues. Model-based certification – a vision. In *High Confidence Software and Systems Conference*, Annapolis, USA, 2018. URL <https://cps-vo.org/node/47421>.
- [126] Jérôme Hugues. European space robotics control and operating system (ESROCOS), Invited Talk. In *12th National Conference on Software and Hardware Architectures for Robots Control*, Toulouse, FR, June 2017. URL <https://sharc2017.sciencesconf.org/resource/page/id/14>.
- [127] Christophe Garion and Jérôme Hugues. From learning examples to high-integrity middleware, comparing acsl and spark. In *Frama-C & SPARK Day 2017*, pages pp. 1–28, Paris, FR, 2017. URL <https://frama-c.com/FCSD17.html>.
- [128] Jérôme Hugues. Model-driven engineering, architecture description language, a field report. In *Seminar of the Decision And Control Laboratory (DCL) at GeorgiaTech*, May 2016. URL <http://dcl.gatech.edu/events/hugues16/>.
- [129] Jérôme Hugues and Julien Delange. Modélisation et analyses d'architecture IMA à l'aide d'AADL : analyses de sûreté de fonctionnement et génération de code. In *Journées Méthodes Formelles*, Toulouse, FR, January 2016. URL <http://projects.laas.fr/IFSE/FMF/J6/>.
- [130] Jérôme Hugues and Julien Delange. Modeling and Analyzing IMA Architectures with AADL, From Modeling to Safety Evaluation and Code Generation: A Case-Study. In *SAE Aerotech 2015*, Seattle, US, September 2015. URL <https://www.sae.org/calendar/techsess/221683.pdf>.
- [131] Jérôme Hugues. Ingénierie dirigée par les modèles – une approche pragmatique pour la génération de code. In *Séminaire DGA ISCLP : Méthodologies et Technologies innovantes pour les systèmes embarqués*, November 2013. URL <https://www.ixarm.com/fr/Seminaire-ISCLP-Methodologies-et>.
- [132] Jérôme Hugues. Model-based, model checking: the missing bits. In *Séminaire Inria/CONVECS*, Grenoble, France, November 2013.

- [133] Jérôme Hugues. A programming language view to model-driven engineering. In *Séminaire ONERA/DTIM*, Toulouse, France, June 2013.
- [134] Jérôme Hugues. Bridging the modeling/verification gap. In *Software Certification: Methods and Tools (Dagstuhl Seminar 13051)*, pages 125–125, February 2013. URL <https://www.dagstuhl.de/en/program/calendar/sempn/semnr=13051>.
- [135] Jérôme Hugues. Analytic virtual integration of cyber-physical systems & aadl. In *Science and Engineering of Cyber-Physical Systems (Dagstuhl Seminar 11441)*, pages 9–9, February 2012. URL [https://www.dagstuhl.de/no\\_cache/en/program/calendar/sempn/semnr=11441](https://www.dagstuhl.de/no_cache/en/program/calendar/sempn/semnr=11441).
- [136] Jérôme Hugues. AADL for Cyber-Physical Systems: Semantics and beyond, validate what's next. In *The Robotics and Embedded Systems Seminar (RESS)*, UC Berkeley, April 2011. URL <https://ptolemy.berkeley.edu/projects/chess/pubs/836.html>.
- [137] Jérôme Hugues. AADL, de l'analyse à la génération de code. In *Séminaire ONERA/DTIM*, March 2010.
- [138] Jérôme Hugues. PolyORB: Leveraging Ada to build Distributed Real Time and Embedded Systems. In *XV JORNADA TÉCNICA DE ADA-SPAIN*, March 2007. URL <http://www2.ati.es/spip.php?article583>.
- [139] Jérôme Hugues. Modélisation d'un ORB CORBA en Réseaux de Petri. In *Journée Ada-France sur le thème Ada et Modélisation*, May 2004.
- [140] Jérôme Hugues. Modélisation et vérification de composants d'intergiciels. In *Journée du GDR STRQdS, Intergiciels Temps Réel*, April 2004.
